

## Anion Gap value indicative of +60% Mortality Rate.

Berrijam AI explored 50 factors in MIMIC-III database of ICU patients with heart failure and their mortality risk, and found the 2 strongest indicator of mortality were Anion gap and Rel Failure.

Anion Gap (normal 4 - 12 mmol/L) measures the blood acidity levels. By avoiding running 50 tests, hospitals and triage and prioritize patient more quickly, saving lives and unnecessary tests.

### Most Likely Yes:

Anion gap > 16.91 and  
Rel failure > 0.0

9.15%  
More Likely  
"Yes"

Mortality = 22.67% (17 of 75)

Segment Size = 6.38% (75 of 1176)

### Most Likely No:

Anion gap ≤ 16.91

3.24%  
Less Likely  
"Yes"

Mortality = 10.28% (108 of 1051)

Segment Size = 89.37% (1051 of 1176)
